SPECIFICATION FOR THE PRODUCTION OF
ESA STUDY CONTRACT REPORTS

SPECIFICATION FOR PRODUCTION OF ESA STUDY CONTRACT REPORTS

1. PURPOSE

The object of this specification is to ensure some uniformity of production of ESA study contract reports for convenience of use and storage, and to ensure that they are of suitable quality for photocopying and microfilming and for preservation as archive documents.

2. REPRODUCTION

2.1 Process

2.1.1 The reproduction process shall produce copies which are clean, clear and durable such as lithography, letterpress or photogravure.

2.1.2 Reproduction by stencil duplicators is NOT regarded as suitable.

2.2 Page size

The page size shall be A4 (210 x 297 mm).

2.3 Paper

The text shall be printed on good quality paper suitable for use with the chosen method of reproduction.

2.4 Covers

2.4.1 The size of covers shall be at least equal to the page size and not more than 15 mm greater.

2.4.2 Covers should be printed preferably on card or cloth. The provision of ornate plastic covers is NOT recommended. They add nothing to the subject content and are difficult to shelve.

2.5 Type

Type shall be of the size equivalent to that of a typewriter (normally about 10 point) but in any case not less than 8 point. Spacing shall be sufficient to allow formulae subscripts to be clearly included in text.

2.6 Ink

Ink shall be black enough to produce an image sufficiently dense to ensure good quality after reproduction. Colour printing is NOT recommended except to the extent that it may be necessary for the purposes of the report.

2.7 Binding

2.7.1 The report shall be bound along its left side. The binding shall be strong enough to protect and secure the contents for a reasonable time and shall allow the report to open flat without damaging the report.

2.7.2 The use of plastic comb for binding is NOT recommended and is definitely NOT suitable when the report is at all lengthy.
